

# Sleep. Nightshift's on.

*Nightshift fixes what breaks while you sleep. The agent proposes. The Lantern (a wristband) decides.*

**Sketch each step (screen, wristband, phone):**

Four large dashed rectangular boxes for sketching each step of the process.

# The Lantern: one word, one color

*Green approves, blue approves shorter, red denies, gray undoes, yellow shows events, double shake revokes everything.*

## **WATCH**

gold sweep: a routine check ran

## **DOWN**

red flash: a check failed

## **THINK**

amber chase: the agent is investigating

## **APPROVE / HOLD**

amber pulse: needs your press (HOLD: press the same button twice)

## **FIXING**

amber solid: approved, running

## **HEALTHY**

green: health check passed

## **TRUST 1..3 / EARNED**

gold LEDs fill: safe fixes counted, then it earns autonomy

## **ESCALATE**

red and amber: nobody pressed in time

## **BLOCKED**

red: policy stopped it, no press can allow it

Sketch the board and your hand here:

# The night-garden dashboard

*Sketch your own layout, or label what each block shows.*

**HERO:** Sleep. Nightshift's on. + moon + big state sentence

**THE GARDEN:** one flower per device (bloom, wilted, asking, blocked)

**AGENT TERMINAL:** every command, output, health

**AGENT REASONING:** live thoughts + the skill it used

**NIGHTSHIFT THREAD:** ask a question, replies with cards

**TONIGHT:** incident stories with a why line

Also: Earned trust plant, cost of a fix, Skills library (from the database), Good morning report, Replay the night.

# How it fits together

*Draw the arrows yourself. Devices dial out; nothing dials them.*

**Your sketch: where does the Lantern sit? who talks to whom?**

A large dashed rectangular box provided for sketching the system architecture, showing the placement of the Lantern and the communication flow between components.

# Notes: how Notability helped
